Patient ID: 2017010241  
Name: Mr. Sanjay Pherwani  
Sex: M  
Date: 30-Jan-2017

Ref By: SELF  
Study: Neck  
Examined By: Dr. Abhay Apte MD

**O/C/O - Ca left BM - Follow up**

A well defined hypoechoic round node measuring 2.2 x 1.5 cms. is seen in left submandibular region. It shows central irregular cystic area.

Multiple smaller subcentimeter round hypoechoic nodes are also seen close to this.

Previously seen well defined oval shaped hypoechoic nodes in left upper neck ( level IB ) persist. Larger one now measures 2.6 x 1.5 cms. in size. Central cystic area is seen.

Few well defined oval shaped nodes with preserved hilum are seen in neck on both sides ( level II ) ( not significant ).

Both lobes of thyroid are normal in size and texture. No focal mass is seen on left side. A small 7 x 4 mm. well defined hypoechoic nodule is seen in right lobe.

Isthmus is normal.

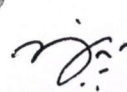

No other mass or fluid collection is seen.

Neck vessels appear normal.  
No other abnormality is noted.

**IMPRESSION -**

1. One large and multiple small nodes in left submandibular region. Large node shows central cystic area ( new nodes ).
2. Previously seen left upper neck nodes are also larger in size.

Needs FNAC/ Biopsy.

  
Dr. Abhay Apte M.D.
