Patient Name: GHOSH KUSUMIKA	Patient ID: 2017/01/107
Patient Age: 26 Y / F	Referring doctor:
Date of examination: 30 January 2017	Examination: ULTRASOUND

Left Breast Ultrasound Report

Indication:

- Lump in the left breast.

Findings:

Left breast was examined with a high frequency linear transducer.

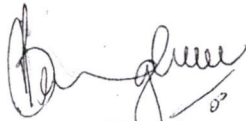

An oval solid homogeneously hypo echoic circumscribed lesion with parallel orientation is seen in the retro areolar region of left breast measuring 25.5 x 20.4 mm. Internal vascularity is seen.

No calcification is seen within it.

On shear wave elastography shear wave velocity within the lesion 2.75 m/sec.

Above is likely to be due to a fibroadenoma.

A follow up is suggested for the same

Dr. Beenu Varghese.
