Name: Mr. Sanjay Pherwani
Sex: M
Date: 23-Dec-2016

Ref By: SELF
Study: Neck
Examined By: Dr. Abhay Apte MD

O/C/O - Ca left BM - Follow up

Both lobes of thyroid are normal in size and texture. No focal mass is seen on left side. A small 7 x 4 mm. well defined hypoechoic nodule is seen in right lobe.

Isthmus is normal.

Two well defined oval shaped hypoechoic nodes are seen in left upper neck (level IB). Larger one measures 1.7 x 0.8 cms. in size. Central echogenic hilum is preserved. Color flow imaging shows mildly increased vascularity.

Few well defined oval shaped nodes with preserved hilum are seen in neck on both sides (level II) (not significant).

No other mass or fluid collection is seen.

Neck vessels appear normal.

No other abnormality is noted.

No significant change as compared to previous study.
